

# Intelligent lighting

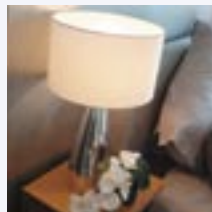

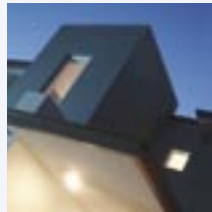

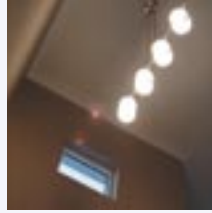

# The lighting revolution is here

C-BUS lighting control system.

We understand you are an individual and the way your home interacts with you is based upon your desires and should not be limited by convention.

'Architectural Lighting' is designed to accentuate and draw the eye to physical statements within and around the home whether it be art, a water feature or elements of the home's architecture itself. By going one step further, and adding lighting control, we can add further grandeur to this experience by slowly fading lights on or off, and in sequence to attract the eyes in a deliberate manner in much the same way as a theatrical event.

Lighting control also offers very functional and practical applications, allowing the home to be broken into segments for simple control. For example, in large homes with one or two occupants, unused floors or wings can be switched off when no guests are visiting with the press of a single button.

## What C-BUS does

C-BUS effectively gives your house a brain. Programmed light switches control the lights with far more intelligence than simply on or off. Here are some of the features Intelligent Home includes as standard in all lighting control projects:

### Living Mode

A single button (or your touch screen) ramps up all the main living area lights in dramatic sequence.

### Movie Mode

Dims and switches off all non-essential lighting, while slowly 'ramping-on' feature lighting, for a relaxing atmosphere.

### Dining Mode

Table lighting turns on, while peripheral dining room lighting dims, for a perfect romantic or social backdrop.

### Goodnight and Perimeter Modes

One button next to the master bed shuts down the whole home at night, without the need for running around to check every room. Ideal for 'empty nesters' with a large two-storey home. A second button switches on all outdoor and perimeter lighting in the event that you hear a noise outside.

### Away Mode

While your on holidays, lights come on and off automatically to create the illusion that you are still at home.

### Touch Screen

A touch screen is provided to the main living area, providing not only the brains and clock for the system, but far more control than even 50 light switches could offer. Like the rest of the system, its design is stylish and cutting-edge.

### Individual Dimming

Dim individual rooms without ugly dimmer switches. Individual switches press on and off, and also alter brightness by pressing and holding. Just press and hold the switch and the light ramps up, press and hold again and it dims. (Select areas only.)

## Additional Options

### Designer Switch Plates

Choose from a stunning selection of architectural switch plates, including stainless steel and even glass.

### Over the Phone Control

Ring your home from a remote location and voice prompts allow you to turn on lights, or even open the front door.

### Security Integration

When you leave home in the morning, a single button will shut down the home and arm the security. Note: Security System is additional

### Future Outdoor Lighting

The system hardware can be located to facilitate the addition of further outdoor lighting in the future.

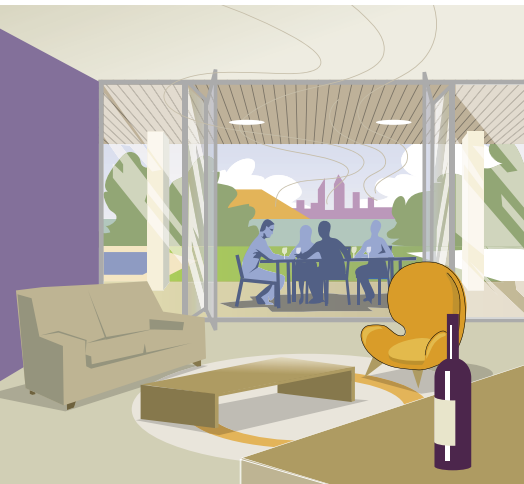

### Control of your Home from your PC

Standard Intelligent Home design connects your C-BUS system to your standard 'structured cabling'. A software and hardware package soon to be available allows you to control your home with a click of your mouse, or change the programming when necessary.

Please note: 'C-BUS' lighting control is a specialist product requiring much client/designer interaction. A formal lighting plan is required for a system quote to be generated.

# Other Intelligent Home Solutions

## Sound to Go

Multi-room Audio is the 'must-have' product for the discerning home purchaser. Imagine being able to listen to your favourite CD throughout your home and have independent volume control in each area. For more information go to [www.intelligenthome.com.au](http://www.intelligenthome.com.au) and download the on-line brochure.

## Intelligent Security

Unfortunately many security systems are never used once installed, because they are too complicated to use. Intelligent Home offers 'customised' and 'off the shelf' security systems, designed for simplicity of use. For more information go to [www.intelligenthome.com.au](http://www.intelligenthome.com.au) and download the on-line brochure.

## Intelligent Theatre

The rise in popularity of dedicated Home Theatre has been enormous in the last 2 years. But where do you get the advice you need during construction on issues such as cabling, room design, ceiling design, lighting and components? Intelligent Home can work with you and your builder to have the foundations of a great theatre installed during construction. We can even offer a turn-key solution including theatre components if you require. For more information go to [www.intelligenthome.com.au](http://www.intelligenthome.com.au) and download the on-line brochure.

## Intelligent Phone and Intercom

Imagine being able to answer the front door from any phone in the home including cordless phones. Imagine being able to divert your front door station to your mobile when you leave the home. What if you were able to open the front door from your mobile phone, when desired! Full internal paging and intercom for up to 10 users! Technologically advanced to anything else on the market and remarkably inexpensive. For more information go to [www.intelligenthome.com.au](http://www.intelligenthome.com.au) and download the on-line brochure.
