

Are you going to give your new home the IQ it deserves?

-  smart wiring
-  controlled lighting
-  multi-room audio
-  home theatre
-  security & CCTV
-  intercom & phone
-  renewable energy

Smart Wiring

Since 2000, Intelligent Home has completed over 7000 Smart Wiring installations.

Smart Wiring remains the core of the Intelligent Home ideal. Without a Smart Wiring backbone, a home is not Intelligent and its conventional cabling will be obsolete within 5 years.

10 reasons why EVERY HOME should have Smart Wiring:

- The home now needs significantly more internet speed than the office. Entertainment requires speed and integrity of signal. Wireless is not sufficient, especially when multiple applications are occurring simultaneously. High definition video, surround sound and gaming applications in particular require more speed.
- Smart Wiring allows reconfiguration of the home over and over again as your needs change or as the home is sold. This avoids the need for expensive rewiring.
- VOIP (Voice over internet) style phones and services are quickly taking over from conventional phones. A Smart Wiring network is the most effective way to have VOIP services in the home, allowing multiple calls simultaneously.
- CAT 6 Data cable (used in Intelligent Home's Smart Wiring) can be used for conventional phones as well as networking/VOIP. Conventional phone cabling cannot be used for networking and so is severely limited. (The average new home will have conventional television and telephone points installed by their builder. The upgrade to a Smart Wiring platform may not be as expensive as you think).
- Most new theatres have a networking function. In an Intelligent Home off the shelf Smart Wiring system, all TV outlets have CAT 6 data (network) ports as well.
- The digital content available for the end user is huge! Try typing 'video on demand' into your search engine and see what pops up. Why limit this huge amount of information to just one family member at a time and at a frustratingly slow speed?
- Smart Wiring provides network security not possible with other networks. Furthermore, multiple individual networks can be set up if required.
- The transition from analogue to digital free to air TV and from digital to video streaming, is a continuum. Only an Intelligent Home Smart Wiring system is fully backwards and forwards compatible.
- Embracing digital makes sense for the planet. E-Books, movie downloads, music and digital storage rather than hardcopy will greatly reduce transport, raw materials, packaging and landfill. Furthermore, digitally saved content can't be scratched, or misplaced.
- Both Telstra and Foxtel are pushing the frontiers of digital delivery into the home. Both recently released new specifications recommending upgraded cabling standards into the home.

If you are building a new home please call for more information PRIOR to construction. Cabling your home later may be cost prohibitive. For more detailed information, or to book an obligation free appointment with our designers, call 1300 652 633 or go to our website www.intelligenthome.com.au.

Every Intelligent Home Smart Wiring system now includes category 6 cabling as standard

Multi-Room Audio

Music through the home can inspire, motivate relax and recharge the soul, depending upon you mood and what you are playing. Multi-room Audio systems allow central CD's, Radio and Foxtel to be played in one or multiple rooms simultaneously.

Visit our state of the art showroom, for a demonstration of one of the many systems available. Intelligent Home is the industry leader in 'multi-room audio' Whatever your musical preferences or budget, Intelligent Home can supply, cable, install and commission a system to suit: A true end to end solution incorporating any additional source equipment (if required).

We can even help you cross the divide between conventional music sources such as CD and radio, to music management and web radio streaming. Our team can even convert your existing CD library to hard-drive for ease of use.

Basic multi-room audio: Allowing your existing or new multi zone amplifier to be played in several areas simultaneously. A must for every Alfresco and entertaining area

Add Basic Control: Now each zone has its own keypad and has basic switching and volume control capabilities independent of the rest of the home.

Add high end control: Now all zones can be controlled via one remote control unit. Play list management and MP3 control is possible as is live streaming of web radio

Home Theatre

Whether on a champagne or beer budget, the fundamentals of a good theatre are often the same. Intelligent Home can advise in all aspects of design and liaise with your builder/designer/cabinet maker to make sure your room layout, ceiling, lighting and electrical all add up to the optimal theatre experience. We supply

and install industry-leading equipment and offer extended warranty and service options, all for one fixed price. And being Intelligent Home, the finished result will be second to none. Our unrivalled expertise will make your system simple, intuitive and enjoyable to use.

Media Centre and Streaming Devices

Have you just got into MP3's? Perhaps you have just purchased a digital video camera, or started downloading videos from the internet? Whether you are new to the digital revolution, or have been into it for years, a Media Centre or streaming device is definitely the way to go. Utilising the Smart Wiring in your home, you can now use your theatre or TV room to access the internet, play or listen to digitally stored content, record, burn to disk, email to friends and more. Whatever your hobbies or interests, digital recording and storage is the perfect way to manage your images, video and audio content. Ask us for a demonstration at our showroom.

Control

Universal Remote controls for the Theatre and or Entertainment area have become increasingly popular over the last several years. Universal remote controls will not only allow you to control all of your equipment, but mean that one press of one button can set a sequence in action. For example "TV on", "amplifier on", "Blu Ray on". Each remote is programmed with ultimate ease of use being the prime concern.

Cabinets

Intelligent Home can work with cabinet designers and manufacturers for custom built solutions, or supply a range of 'off the shelf' audio visual cabinets designed specifically for our Theatre and surround sound options. All can house right, left and centre channel surround sound speakers and many can house subwoofers.

Security

Security remains a very personal and individual priority for each client. Whether you want something basic, or something more comprehensive, it needs to be easy to use. Intelligent Home has been an industry leader in security for years. Whether your system is stand alone, dials your mobile phone or monitoring company, or is part of a bigger integrated system within the home, we have a solution to suit. Intelligent Home's monitoring rates are competitive and our installers have the relevant telecommunications licences to complete the job. Just let us know your requirements and we can organise a quote to suit.

Closed Circuit Cameras

Would you like single or multiple closed circuit camera footage available through every television in the home? Perhaps you want the footage saved to hard drive, or even emailed to your workplace. Intelligent Home can pre-wire your home during construction and recommend appropriate cameras post-construction based on the field of view and quality of image desired.

Intercom

Intelligent Home offers a number of 'off the shelf' intercom solutions. Our designers can go through the options of either video intercom, or the integrated Intelliphone, allowing you to answer the front door from any phone in the home.

Controlled Lighting

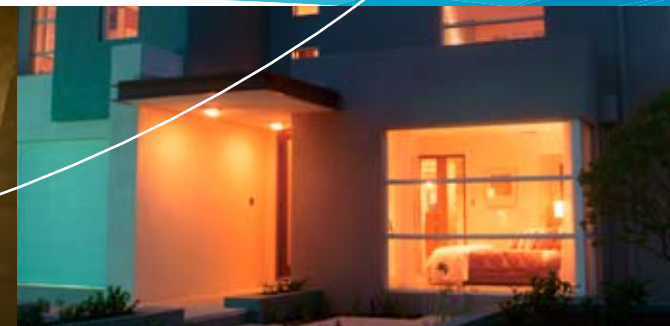

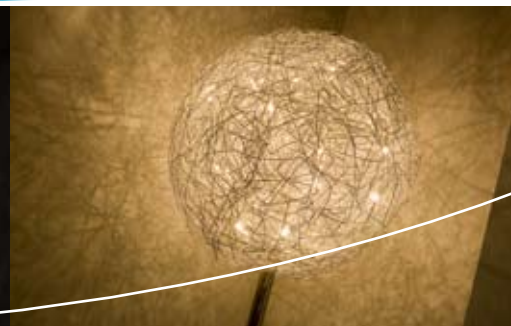

Add intelligence and common sense to the way you apply the light in your environment. Unlike conventional/mechanical switching of lights, the intent here is to allow more practical, energy efficient and dramatic functions:

- A single button next to the bed to switch off the whole home;
- Lights that come on automatically at dusk irrespective of the time of year;
- Welcome home sequences that draw the eye to the architectural showpieces of the home.

Controlled Lighting can be for the whole home, or just for that killer theatre!

Want more control in your life! Intelligent Home specialises in adding the control of motorised curtains/blinds, security system and multi-room audio to your main lighting control system.

We have refined the art of programming lighting control so that your home is intuitive and has a touch of Hollywood, as well as the 'nuts and bolts' everyday functions you require

The Intelligent Home concept

In 2000 an electrical contracting business and a high-end hi-fi company started a new business venture. Realising that neither company could provide a complete end to end solution for their clients, it was decided to form a new business model that could...and Intelligent Home was born.

While Smart Wiring was the product required, we realised that to become an industry leader, we needed to go further. It was decided the business would focus on two important strategies to fulfill this market requirement. Firstly, we would strive to become industry leaders in new technology, enabling us to advise our clients on correct solutions for their needs and wire with this purpose in mind. Secondly, we would offer a 20-year Smart Wiring component warranty. In other words **'design right, install right, first time, every time'** This mission has grown Intelligent Home into Australia's largest installer of Smart Wiring and 'convergent home' products, with over 7000 completed jobs over 7 years.

For more information on the Intelligent Home difference, including the unique 'Intelligent Home 20 year warranty', 'formal checklist and scope of works document', and the Intelligent Home 'stamp of approval' call 1300 652 633.

Plan to make yours an Intelligent Home

10 EASY STEPS

- Step 1.** Call Intelligent Home to book appointment with a consultant.
- Step 2.** Rough ideas sketch on early draft plans.
- Step 3.** Pre-construction cabling finalisation and scope of works on final plans.
- Step 4.** Prelay conduits before concrete slab pour.
- Step 5.** Cable pre-wire during construction after roof timbers installed.
- Step 6.** Cable fit-off during construction after lock-up.
- Step 7.** Call your local service provider to arrange Phone, Internet & Pay TV connection.
- Step 8.** Revise system hardware incorporating new models and technology advancements.
- Step 9.** Installation of system hardware for total system operation.
- Step 10.** In-home client handover and operational training complete with owners manuals .

The 'mesh' between your new home and your Intelligent Home installation

The Intelligent Home internal company processes to give you peace of mind include:

- 1 Your Intelligent Home consultant asks all the questions relevant on your job. Clear communication means we should be asking as many questions as you do. Even within the framework of our basic packages, significant details can be missed without proper consultation.
- 2 These details are documented in our 'checklist and scope of works' so your quote is accurate for your current and future needs and so we can deliver the solutions discussed.
- 3 Your checklist and scope of works clearly outlines Intelligent Home's responsibilities and yours, so the job can progress as smoothly and efficiently as possible.
- 4 Your job is processed and any outstanding information required is chased up.
- 5 All jobs are installed, labelled and commissioned in the same way each and every time, using standardised installation procedures. Wherever possible, the team that starts your job ends your job.
- 6 Your installer's details are left in the panel, meaning future queries about site-specific issues are easily answered. Your plans are also archived at Intelligent Home.
- 7 Our Handover may be for a basic Smart Wiring or Security package, or it may be more involved with the supply and installation of Multi-Room Audio and/or Theatre. In any event, Intelligent Home's team will be on time and organised to finish up your job as efficiently and neatly as possible. If there is a problem, the team will rectify the problem as soon as possible.
