

3 things you need to know about fibre technology, the National Broadband Network and your new home...

1

What is fibre technology and the National Broadband Network?

Fibre technology is the new communications network that is being rolled out across Australia. It is replacing the old copper wire phone network with a Fibre-To-The-Premise (FTTP) network. The National Broadband Network (NBN) is one of the companies providing that technology. This means your new home will very soon have a FTTP connection for your telephone and internet, but more importantly, you will be able to access a world of new entertainment and communication services that this new technology will enable.

Why it's so good

The new fibre network will enable super high-speed internet, up to five times faster than the old copper wire network. This high-speed internet will mean more than just fast downloads on your computer, it will bring a new world of entertainment and information to your fingertips. Including:

- IPTV – TV services like you've never seen before brought to your TV in a completely new way – via the internet – including 3D HDTV, Subscription TV (e.g. FOXTEL) from many other new providers that will come online.
- Interactive multimedia (online video games)
- Video telephone (Skype)
- Video-on-demand – download videos rather than go to the video library.
- Home shopping
- Government services like e-health, e-education and others.

As high speed internet becomes more widespread there will be a whole range of services and devices that take advantage of this speed that we haven't even dreamt of yet.

2

How do I make the most of the NBN?

To make the most of the NBN you need to ensure that your connection to the network is able to deliver the maximum speed throughout your home. This can only be achieved by correct design and installation of a NBN compliant cabling system.

The Federal Government's NBN implementation study indicates the need to hardwire houses for bandwidth-hungry applications like internet TV.

Wireless internet, while popular and convenient, will not cope with the speed and bandwidth NBN will bring; experts agree that the home should be a combination of cable and wireless.

Intelligent Home is the industry leader in smart wiring and home automation. We've been connecting homes with state-of-the-art technology for more than ten years.

We've created a range of affordable packages that will get your home ready for FTTP technology and set you up to take advantage of all the possibilities that the NBN will bring.

your home

Intelligent Home for all home technology

Intelligent home theatre

Proper planning of your home theatre and other audio visual needs can save you thousands and give you a far better end result.

Intelligent Home would like to invite you for an obligation free consultation, to go through such items as hardware options, cabinet design and layout, pre-wiring requirements, room orientation, furniture layout and design, power requirements, ceiling and lighting design, and related add on functions such as multi-room audio, one-touch control systems and networkability.

Simply secure

Intelligent Home security system is designed for simplicity and all components have been selected for reliability. Security systems are armed and disarmed in the morning and evening when you may be tired, rushed or distracted so simplicity of use is actually very important. Some insurance companies do not cover claims if installed alarm systems are not activated. Ask us for a quote on a system to suit your new home.

Video intercom

There is now no longer the need to compromise the safety and security of your home and family with an Intelligent Home Video Door Phone system designed to give you full communication capability with those at your front door.

Intelligent Home Video Door Phones are a high quality, expandable system that features a doorbell and camera unit with a built-in microphone and an easy to use internal video door phone unit, with a colour video image monitor, so you can view and converse with anyone at the door without having to be seen.

Multi-Room Audio

Music through the home can inspire, motivate, relax and recharge the soul, depending upon your mood and what you are playing. Multi-room Audio systems allow central iPod, CD's, Radio or Foxtel to be played in one or multiple rooms simultaneously.

Visit our state of the art showroom, for a demonstration of one of the many systems available. Intelligent Home is the industry leader in 'multi-room audio'. Whatever your musical preferences or budget, Intelligent Home can supply, cable, install and commission a system to suit.
